

SMARTTRADE™ — User Environment & Trading Control Guide

Professional overview of your personal SmartTrade trading environment, control functions and operational monitoring tools.

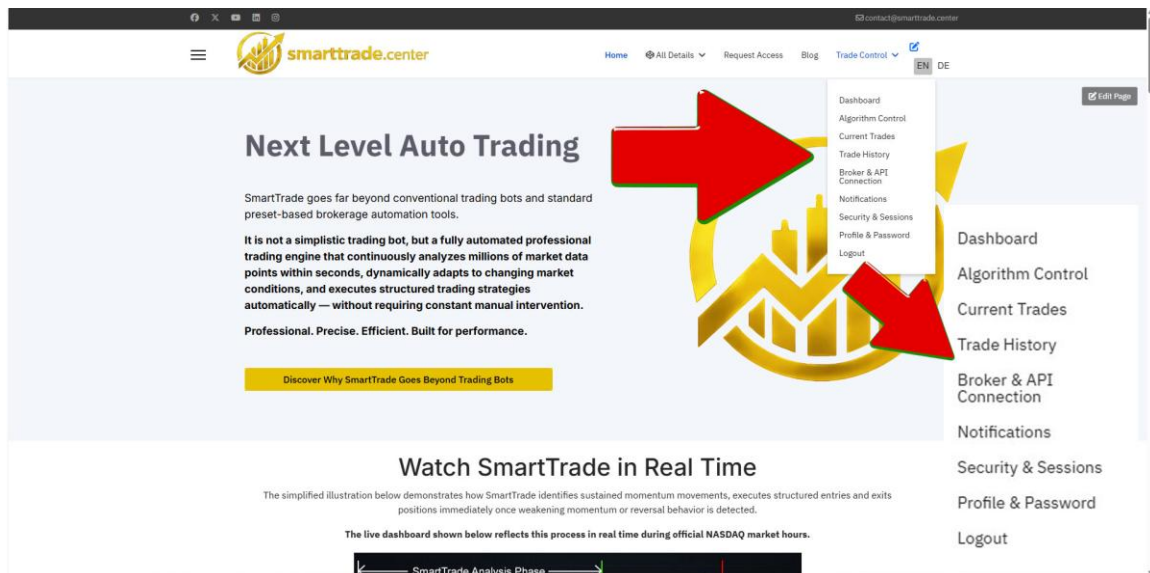

Version: Initial Draft | Generated: 2026-05-24 UTC

This is Your Professional Autonomous Trading Environment

Once your individual trading engine, “SmartTrade”, has been configured according to your requirements and deployed on your dedicated server environment, you will receive your personal username and password from us. For security reasons, we strongly recommend changing your password immediately after your first login. Please ensure that you use a strong password consisting of upper- and lower-case letters, numbers and special characters. As SmartTrade operates in connection with your financial assets, maximum account security is essential.

Your Individual “Trade Control” Menu

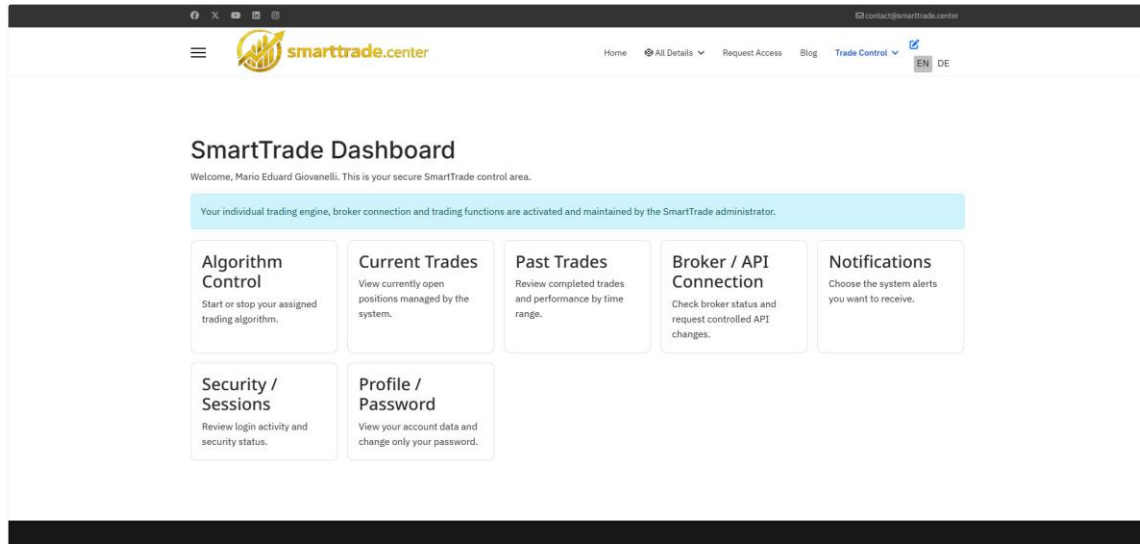

This menu provides centralized access to all important SmartTrade information and control pages within your personal trading environment.

The screenshot displays the SmartTrade user interface. At the top, there is a navigation bar with the logo 'smarttrade.center' and a 'Trade Control' dropdown menu. The main content area features a section titled 'Next Level Auto Trading' with a large red arrow pointing to the 'Trade Control' menu. The menu items include: Dashboard, Algorithm Control, Current Trades, Trade History, Broker & API Connection, Notifications, Security & Sessions, Profile & Password, and Logout. Below this, there is a section titled 'Watch SmartTrade in Real Time' with a timeline showing the 'SmartTrade Analysis Phase'.

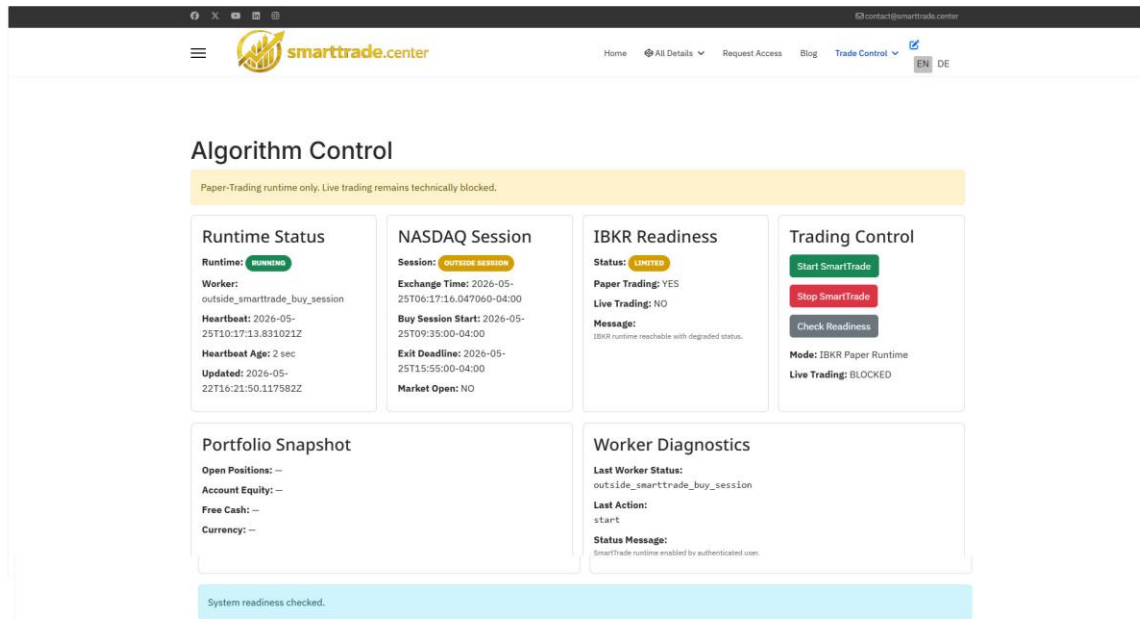

Dashboard

The “Dashboard” serves as your central overview page. From here, you can access all major SmartTrade information sections and monitor the current operational status of your trading environment.

Algorithm Control

The “Algorithm Control” page provides an overview of the most important system functions, operational statuses and runtime information. Most importantly, this section allows you to start your trading engine (“Start SmartTrade”), stop it if required (“Stop SmartTrade”) and perform readiness checks (“Check Readiness”) to verify operational availability.

Current Trades

The “Current Trades” section provides a detailed overview of all currently active positions, including relevant trade and execution information.

Current Trades

Open positions currently managed by the system. This list updates automatically.

Open Positions: 18

Instrument	Exchange	Quantity	Entry Price	Current Price	P&L

Completed Trade Activity P&L:							+16,573.94

Temporary demo display; completed trade activity is generated for presentation screenshots only.

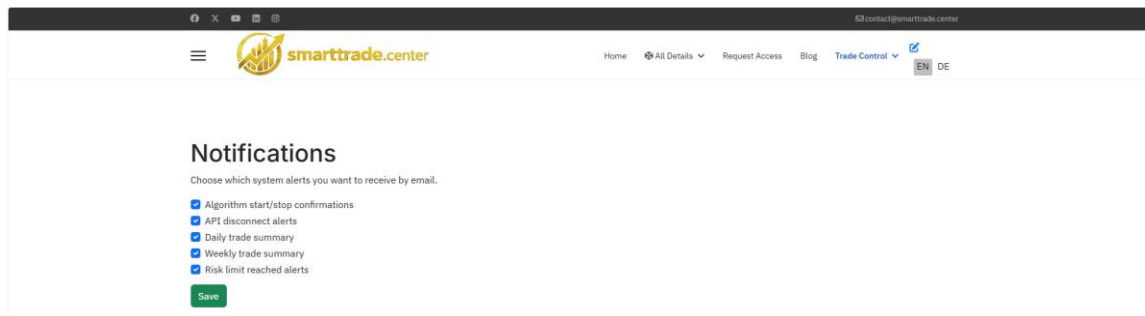

Broker / API Connection

Shortly after opening the “Broker / API Connection” page, your broker connectivity information and API status will be displayed. You may also perform a direct connection verification using the “Test Connection” function.

The screenshot displays the 'Broker / API Connection' interface on the SmartTrade.Center website. At the top, there is a navigation bar with the logo and links for Home, All Details, Request Access, Blog, and Trade Control. The main content area features a title 'Broker / API Connection' and a sub-header 'View your broker integration status. For security reasons, API secrets are handled via a controlled onboarding process.' Below this, a status box shows 'Broker: Interactive Brokers / IBKR', 'API Status: CONNECTED', 'Last Heartbeat: 2026-05-25T10:24:09+00:00', and 'Last Error: -'. A blue 'Test Connection' button is positioned below the status box. Further down, the 'Request API Update' section includes a sub-header 'Use this form to request an update of your API connection settings. Do not paste secret keys here.' and a text input field with the placeholder 'Describe what changed (e.g., broker account migrated, API key rotated, new endpoint)'. A green 'Submit Request' button is located at the bottom of the form.

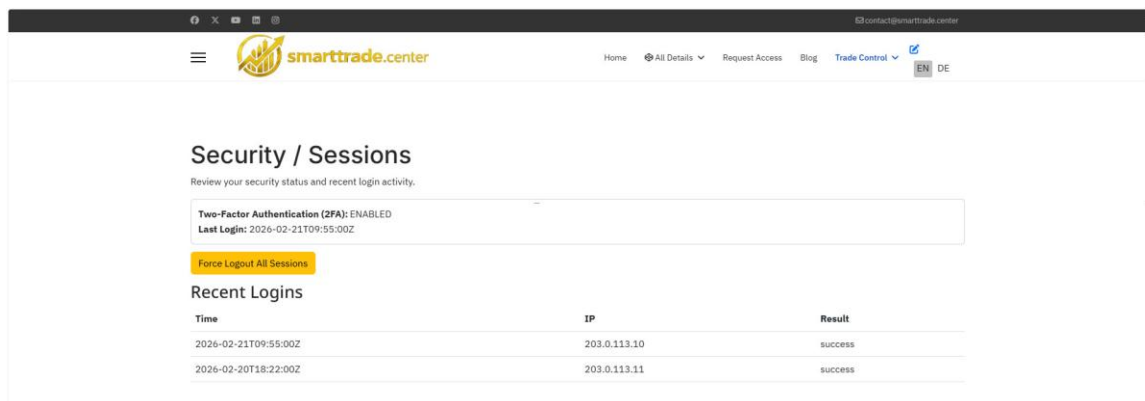

Notifications

Within the “Notifications” section, you may define which system alerts and operational notifications should be sent to you by email. To ensure continuous awareness of potential runtime or connectivity issues, we recommend activating all available notification options and confirming your settings via “Save”.

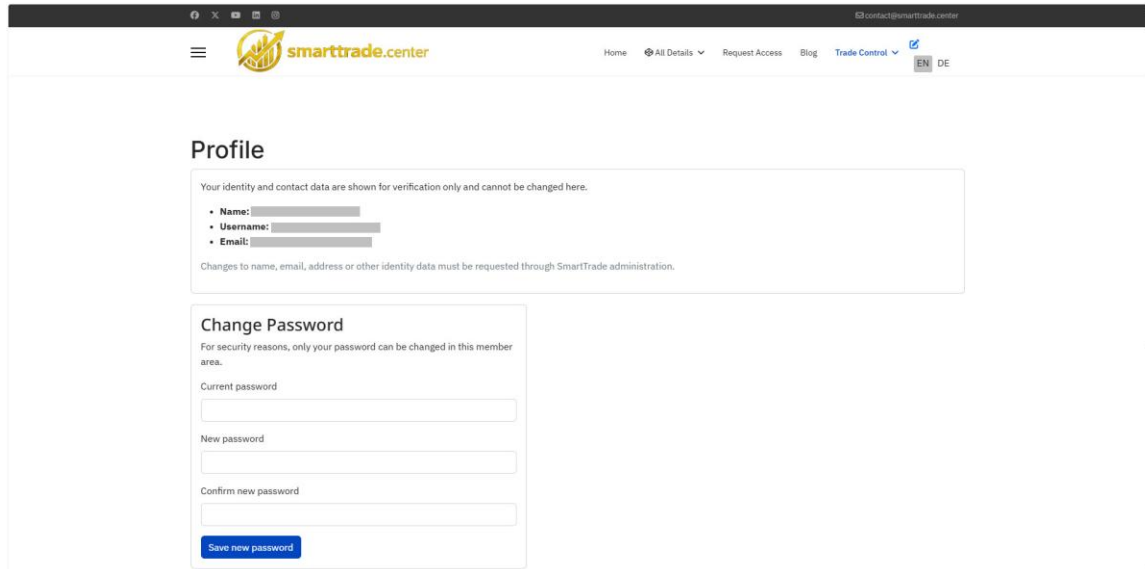

Security / Sessions

The “Security / Sessions” section displays recent login activity associated with your account. In addition, you may request activation of “Two-Factor Authentication (2FA)” for enhanced account security. Once activated, the corresponding security status will also be displayed in this section.

Profile & Password

Within “Profile & Password”, you may review your personal profile information and change your password. Changing your password after your initial login and at regular intervals thereafter is strongly recommended. Certain sensitive account information previously submitted and integrated into the system cannot be modified directly by users for security reasons. Any such changes require direct contact with our team and successful identity verification before adjustments can be performed.

The screenshot shows a web browser window displaying the SmartTrade user interface. The page title is "Profile". At the top, there is a navigation bar with the SmartTrade logo and links for Home, All Details, Request Access, Blog, and Trade Control. The main content area is divided into two sections. The first section, titled "Profile", contains a message: "Your identity and contact data are shown for verification only and cannot be changed here." Below this message, there is a list of user details: Name, Username, and Email, all of which are redacted with grey bars. A note below the list states: "Changes to name, email, address or other identity data must be requested through SmartTrade administration." The second section, titled "Change Password", contains a message: "For security reasons, only your password can be changed in this member area." Below this message, there are three input fields: "Current password", "New password", and "Confirm new password". A blue button labeled "Save new password" is located at the bottom of this section.

Logout

You may securely log out of your SmartTrade environment at any time via the “Trade Control” menu.

A Final Note

Once SmartTrade has been started, we generally recommend allowing the trading engine to operate continuously without unnecessary interruptions, while monitoring its ongoing performance and results.

We wish you continued success with SmartTrade.
